TRADE LIST

Fall, 1912

CUSTOMERS are requested to state the mode of conveyance by which they desire their trees forwarded. When no route is named, we forward to the best of our judgment, without liability for error or delay.

RESPONSIBILITY.—After goods are placed on board cars here, we assume no responsibility for their safe or prompt delivery, or any injury caused by delay in delivery by the transportation company.

ALL CLAIMS must be made upon receipt of goods.

TERMS CASH, on or before delivery to express or railroad agents, unless by special arrangement.

Two hundred and fifty, twenty-five or five of any one variety will be furnished at the thousand, hundred and ten rates, respectively, but single plants of one or more varieties will not be sold at less than 15 cents each, except Vines and Herbaceous Plants, the minimum price of which will be 10 cents each.

PACKING CHARGED EXTRA, but only sufficient to cover cost of time and material consumed in the work.

POST OFFICE ORDERS payable at Dresher P. O., Montgomery Co., Pa.

WESTERN UNION TELEGRAPH, AMBLER, PA. Use Nurserymen's Telegraphic Code or "ABC" Code, 4th edition.

VISITORS are always welcome and should take train at the Reading Terminal, 12th and Market Streets, Philadelphia, for Camp Hill Station, or at Broad Street Station, Pennsylvania R. R., for Fort Hill Station. Be sure that the train taken stops at these stations.

NOTICE.—It is necessary that you should TELEPHONE us (Bell Phone, 226-A Ambler; Keystone Phone, Jenkintown 652-Y), in advance of your coming, so that we can send a carriage to the station for you. Our office is $2\frac{1}{2}$ miles from either station.

CERTIFICATE OF INSPECTION

Our nurseries are inspected several times each year, by inspectors of the Entomological Division of the Department of Agriculture of the State of Pennsylvania, and are free from insect pests and diseases. A certificate of the Department is attached to all snipments, and will also be furnished to customers if desired.

Deciduous Trees

Several years ago we realized that there would shortly be a demand for a better grade of shade trees than were being commonly sold in nurseries at that time. With this idea in mind we commenced transplanting large blocks of all varieties, selecting only nice, straight, first-class trees for the purpose, discarding any crooked or ill-shaped stock. Time has proven the wisdom of our foresight, and while the demand for this class of stock has been greater than our expectation, our supply has been sufficient to meet the demand, and though our sales last year on these trees were very heavy, we still have a good supply on hand for this season's sales.

Our object is to grow a first-class tree, well rooted, with straight trunk and a nice top, and we spare no expense to produce a tree of this character. All crooked trees are discarded. Every tree we send out is a good tree. We stake all of our trees with long bamboo poles, and in that way we get not only a perfectly straight trunk, but a stem right to the top of the tree. This should be kept in mind when comparing our prices with the "cheap" trees usually offered.

Japanese Maples

Why buy cheap imported Japanese Maples, hide-bound stock, poorly rooted, varieties badly mixed up and untrue to name, when you can buy healthy American-grown plants well rooted, vigorous and well-developed tops, guaranteed true to name and at a price very little higher than the imported stuff. All of our Japanese Maples are propagated in our nurseries and are guaranteed true to name.

Magnolias

Large Flowered Chinese Varieties

The following Magnolias have been several times transplanted. They are very bushy plants, branched to the ground. They will be dug with ball of earth and the ball sewed in burlap.

Specimen Shade Trees

This is a particularly fine lot of Specimen Shade Trees for planting for immediate results. These trees were transplanted four years ago and set ten by ten feet apart in nursery rows, allowing ample room for top development. They are abundantly supplied with fibrous roots, have good straight trunks and well developed, symmetrical tops. They are mostly branched from six to eight feet from the ground.

When ordering from this list be careful to mention these "specimen trees."

On account of the height of these trees only orders for carload lots can be taken. They cannot be baled and shipped in less than carload lots.

Deciduous Shrubs

We continually try to impress upon our customers the fact that the mere height of a shrub does not indicate its value, but that its "bushiness" must also be taken into consideration. Shrubs grown closely in nursery rows must necessarily make height, but the "bushiness" is sacrificed. A good, bushy, two to three-feet shrub is worth as much as a "slim" three to four-feet plant, and for results it is worth more.

We grow our shrubs in wide rows and allow plenty of space between the plants in the rows to permit them to develop properly. It costs more to grow shrubs this way than where they are grown closely together, as we cannot plant as many on an acre. In comparing our prices with those of other growers, this fact should be given consideration.

Evergreens

See also Evergreen Shrubs

We feel that we cannot say too much of our evergreens. We give particular care and attention to their culture, transplanting them as frequently as may be necessary in order to secure an abundance of fibrous roots. To this end they are transplanted every two years, and frequently sheared so that they have a good compact and shapely appearance.

All evergreens are dug with ball of earth and the ball sewed into burlap, the cost of which is included in the prices shown in the catalogue.

Vines and Climbers

Our vines are all transplanted plants. We handle them just as we do shrubs, grow them for one year, then transplant them into regular nursery rows; give them plenty of room so that we may get a good bushy well-rooted plant.

Hardy Herbaceous Perennials Ornamental Grasses and Ferns

Here is a splendid assortment of the very choicest hardy perennials for hardy gardens, borders and formal gardens. Not small, weak, microscopic specimens, but strong, well-

rooted plants, capable of producing good, quick results.
"Results the first season" is our aim always, and the general satisfaction our stock is giving is conclusive proof of its superiority.

July to September, etc., indicates the period of flowering.

Meehan's Mallow Marvels

HIS plant has become so widely distributed since we introduced it several years ago that it seems unnecessary to discourse upon its merits at this time. It is a pedigree, being a cross between the southern scarlet Hibiscus and our native swamp Mallow.

It makes a vigorous growth—strong roots making a bushy clump five to seven feet in one season and blooming profusely from midsummer to frost. Being an herbaceous plant it dies to the ground in the fall, shooting from the root again the following spring.

The flowers measure from eight to twelve inches in diameter, and are sold in separate colors, in red, pink, and white.

The plant is extremely hardy, having been tested and grown in all parts of the United States and Canada.

It grows naturally in moist ground but thrives equally as well in any good, rich soil.
